Professional Summary

Software Engineer with hands-on experience building AI-enabled automation, data pipelines, validation workflows, APIs, dashboards, and business process solutions using Python, JavaScript, TypeScript, and Node.js. Experienced in developing LLM-powered applications and integrating AI components into multi-stage automation workflows to solve real-world business problems. Strong background in translating ambiguous business requirements into technical solutions, debugging production workflows, building reporting interfaces, and collaborating with global cross-functional stakeholders. Comfortable owning problems end-to-end and working across backend, data, automation, and AI layers.

Technical Skills

- **Languages:** Python, JavaScript, TypeScript, C++, SQL
- **Full-Stack Development:** Node.js, React, REST APIs, API Integration, Backend Development, Data Processing, Web Application Development
- **AI / LLM:** LLM Applications, Generative AI, LangChain, Retrieval-Augmented Generation (RAG), Prompt Engineering, AI Workflow Design, AI-Driven Process Automation, Machine Learning, Scikit-learn, Neural Networks, Model Evaluation
- **Automation & Data:** Python Automation, Data Pipelines, Data Validation, Data Parsing, Process Automation, Test Automation, API Testing, BDD (behave), Debugging, Defect Analysis
- **Frontend / Analytics:** React, JavaScript, TypeScript, Tableau, Power BI, Advanced Excel, Matplotlib, Pandas, NumPy
- **Engineering Tools:** Linux, Git, GitHub, Jupyter, PyCharm, VS Code, CI/CD Fundamentals, Tornado

Work Experience

SAP Analyst | Deloitte **Jan 2025 – Present**

- Designed and developed multiple Python-based automation pipelines from scratch for enterprise business processes, integrating data extraction, processing, validation, reporting, and AI-enabled workflow stages.
- Built AI-powered automation workflows integrating LLM-based components using LangChain and Claude across multiple pipeline stages to improve process efficiency, accuracy, and decision quality.
- Developed end-to-end workflow solutions combining APIs, data-processing logic, automation components, and dashboards to support complex business processes.
- Built interactive dashboards and reporting interfaces providing stakeholders with visibility into process health, validation results, defects, exceptions, and remediation progress.
- Designed and executed test cases and automated validation checks for Python-based solutions, identifying data inconsistencies, processing failures, and edge cases before release.
- Collaborated with global business, technology, and compliance stakeholders to gather requirements, understand existing workflows, define technical solutions, document specifications, and align on release readiness.
- Troubleshot automation and data-processing issues, investigated root causes, and implemented improvements to increase reliability and reduce manual operational effort.

SAP Intern | Deloitte **Jul 2024 – Jan 2025**

- Developed a Python-based automated reporting and validation module integrating SAP CRM, SPC, and CRT data, reducing manual reporting effort by **75%**.
- Automated data validation workflows using Python to identify inconsistencies and defects, reducing reporting errors by **30%**.
- Built standardized dashboards and automated reporting workflows to support operational monitoring, data quality, and business decision-making.
- Partnered with business and technology teams to understand operational requirements, translate workflows into technical solutions, define test specifications, and troubleshoot issues.

Projects

LabGenie **Aug 2023 – Dec 2023**

- Developed an LLM-powered application using Python to analyze and explain structured health-report data, achieving **96% prediction accuracy**; designed test scenarios to evaluate output correctness, consistency, and interpretability across diverse inputs.

BuildYourPassword **Jan 2024 – Mar 2024**

- Developed a Python-based application combining rule-based validation, breach detection, and machine-learning models including Decision Tree, Logistic Regression, Naive Bayes, and Neural Network approaches; implemented testing across functional and edge-case scenarios.

Education

Kalinga Institute of Industrial Technology, Bhubaneswar **Oct 2020 – Jul 2024**

Bachelor of Technology in Computer Science and Engineering GPA: **8.68**

Additional

Publication: IEEE Publication (2023) – Comparative Analysis of Breast Cancer Diagnosis using Smart IoT-based Approach

Certifications: Neural Networks and Deep Learning (Coursera); Introduction to Networks & Cybersecurity Essentials (Cisco Networking Academy)
